

Medisure Analysis
Time stamp: 12:44 pm
Analyst: Chinonso Eneje

Findings:

The screenshot displays the MX Toolbox SuperTool interface. At the top, the 'Analyze Headers' tab is selected. Below the navigation bar, the 'Header Analyzed' section shows the email subject: 'Microsoft account unusual sign in activity'. A yellow warning box states: 'Copy/Paste Warning: Copy/Pasting a header works for most people, but sometimes it can cause problems with things like DKIM Validation. For the best results, use our Email Deliverability tool'. The 'Delivery Information' section lists several failures: DMARC Compliant (No DMARC Record Found), SPF Alignment, SPF Authenticated, DKIM Alignment, and DKIM Authenticated, each marked with a red 'X'. The 'Relay Information' section shows a table with 'Received' and 'Delay: 3840 seconds'.

Received	Delay:
	3840 seconds

Figure1: image showing delivery information

From Figure1, the delivery information indicates that no DMARC record was found, the email failed SPF alignment and authentication, it also failed DKIM alignment and authentication. It also took 3840 seconds before email could be received. These are abnormal circumstances, ideally emails are received in just few seconds and legitimate emails pass SPF & DKIM alignment and authentication .

Dkim Signature Error:
 There must be at least one aligned DKIM-Signature for the message to be considered aligned. - [more info](#)

Figur3: Image showing SPF and DKIM information

Figure 3 shows that no DMARK record was published, this entails that DMARK could not provide instructions to the server on how to handle the email when it fails SPF or DKIM. The domain of access-accsecurity .com does not designate the IP address 89.144.44.41 as permitted sender.
